

Joshua Hebert

Technical Delivery Manager | Technical Program Management | Delivery Systems & Execution Visibility

Charlotte, NC / Remote | 407-242-5569 | jheebertwd@gmail.com

PROFESSIONAL SUMMARY

Technical Delivery Manager in financial services leading cross-functional execution across UI, mobile, web, API, payments, fraud, analytics, accessibility, and enterprise platform work. Builds lightweight mechanisms that clarify scope, sequence work across teams, surface risk earlier, and create decision-ready visibility for product, engineering, and leadership. Strong TPM fit for client/platform delivery, data-dependent systems, migration/change-in-flight programs, and AI-assisted delivery operations.

SELECTED IMPACT

- Improved program predictability by 25% by building delivery health, KPI, blocker-aging, dependency, and risk views that surfaced execution gaps earlier.
- Reduced manual status collection by 40% by designing Jira, Confluence, and Teams reporting workflows that converted fragmented updates into decision-ready visibility.
- Aligned 10+ product, engineering, business, architecture, analytics, vendor, and offshore teams across concurrent UI, API, platform, and operational workstreams.

PROFESSIONAL EXPERIENCE

Technical Delivery Manager | Ally Financial - Charlotte, NC | Feb 2024 - Present

- Lead delivery for multiple concurrent financial-services technology initiatives spanning UI, mobile, web, API, payments, fraud, analytics, accessibility, and enterprise platform dependencies.
- Translate strategic priorities into sequenced roadmaps, milestones, ownership models, readiness plans, release coordination, and stakeholder decision points.
- Drive cross-org alignment among product owners, engineering leads, architects, analysts, business partners, vendors, and offshore teams by ensuring the right people are in the room and decisions are clear.
- Manage dependencies, risks, blocker aging, scope changes, readiness criteria, escalation paths, and handoffs across front-end, API, platform, analytics, vendor, and operational teams.
- Support analytics, fraud, and AI/ML-enabled delivery efforts by structuring rollout plans, monitoring/adoption needs, stakeholder communication, operational handoffs, and delivery-risk visibility.
- Build lightweight operating mechanisms: dependency maps, RAID views, milestone/readiness dashboards, decision logs, stakeholder rhythms, and executive-ready summaries.
- Use GenAI-assisted workflows to summarize fragmented delivery inputs, pressure-test plans, draft stakeholder communications, and create reusable program artifacts.

Restaurant & Operations Leadership | Multiple Venues - Charlotte, NC | 2008 - 2024

- Led high-volume, multi-site operations requiring rapid prioritization, vendor coordination, team leadership, customer-impact decisions, and issue resolution under pressure.
- Built playbooks, communication routines, training standards, and leader-development practices that strengthened ownership, consistency, and cross-team execution.
- Translated operations background into delivery strengths: calm urgency, stakeholder empathy, practical systems design, and decision-making in ambiguous environments.

RELEVANT DELIVERY SYSTEMS & WORK SAMPLES

Execution visibility: delivery health dashboards, stakeholder reporting views, executive-ready status formats, milestone/readiness views, sprint-to-roadmap planning views.

Risk and decision flow: blocker tracking, dependency maps, escalation paths, RAID/risk registers, decision logs, ownership models, and follow-through loops.

AI-assisted delivery toolkit: personal workflow concepts/prototypes for converting fragmented delivery inputs into clearer summaries, risk signals, communication drafts, and reusable program artifacts.

CORE SKILLS

Technical program delivery: program planning, roadmap execution, milestone sequencing, delivery governance, dependency management, release/readiness coordination, risk management, stakeholder alignment.

Data/platform fluency: analytics delivery, KPI/reporting systems, data-dependent workflows, API concepts, distributed systems coordination, UI/mobile/web delivery, platform dependencies, SDLC, cloud fundamentals.

Mechanisms/tooling: Jira, Confluence, Teams, dashboards, decision logs, delivery health views, stakeholder updates, workflow automation, GenAI-assisted analysis, Python automation learning path.

EDUCATION & PROFESSIONAL DEVELOPMENT

Full-Stack Coding Bootcamp, University of North Carolina at Charlotte: APIs, application architecture, JavaScript/React foundations, software lifecycle fundamentals, cloud and distributed systems concepts.

PMI-ACP Certification Preparation: in progress; formal Agile credentialing to complement practical cross-functional technology delivery experience.
